Politician: Measurable

INT. OFFICE- DAY.

Molly is a small town politician. There is a small scale on her desk with notebooks of different shapes and sizes piled on either side of the scale. One side of notebooks is labeled "Brenda" and the other is labeled "Gunther". The Narrator speaks off screen.

                    NARRATOR
          This is Molly.

Molly puts another, smaller notebook on the "Gunther" side of the scale.

                    NARRATOR (CONT'D)
          Molly is a small town politician.
          Molly wants to award one of her
          employees with an employee of the
          month badge for helping her with
          her infrastructure project. She has
          it down to two candidates. In order
          to calculate which of her employees
          worked the most on her
          infrastructure project, she is
          weighing their time logs.

Gunther's notebooks are slipping, but Molly saves it.

                    NARRATOR (CONT'D)
          Well that was a close one. Molly
          may have mastered this balancing
          act, but she should know that this
          is not a proficient way to assess
          her employees.

Molly takes her hand off Gunther's side. It seems stable.

                    NARRATOR (CONT'D)
          What if one notebook has more time
          logged than the other?
                    (MORE)

                    NARRATOR (CONT'D)
          What if the notebook themselves are
          a different weight? Oh, Molly what
          are you doing?

Brenda's side of the scale falls over.

                    NARRATOR (CONT'D)
          Maybe Molly doesn't have this
          balancing act as perfected as she
          thought. Well, she never was very
          good at Jenga.

Molly picks up Brenda's notebooks.

                    NARRATOR (CONT'D)
          Too bad Molly doesn't have the
          Clockwyz app.

                                        CUT TO:

INT. CELLPHONE-CLOCKWYZ APP.

A phone displaying the Clockwyz app demonstrates how to use
it.

                    NARRATOR
          With the Clockwyz App Molly could
          see how much time all of her
          employees spend on each project.
          Assessing her employees accurately
          and without building an unstable
          mountain of notebooks.

                                        CUT TO:

INT. OFFICE- CONTINUED.

While, Molly is picking up Brenda's notebooks Gunther's
notebooks also fall over, on top of her.

NARRATOR
Well I suppose that was bound to
happen.
